Problem

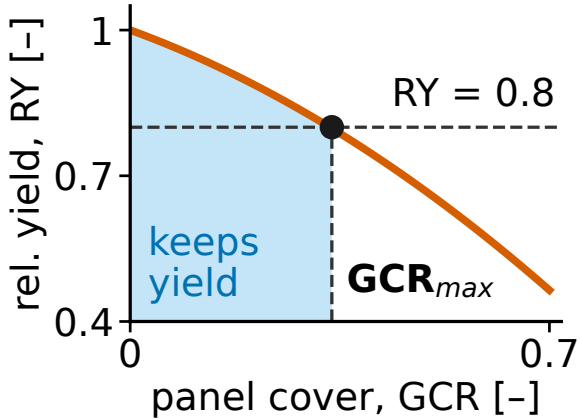

Solar or food on one field?

competing for land

Method

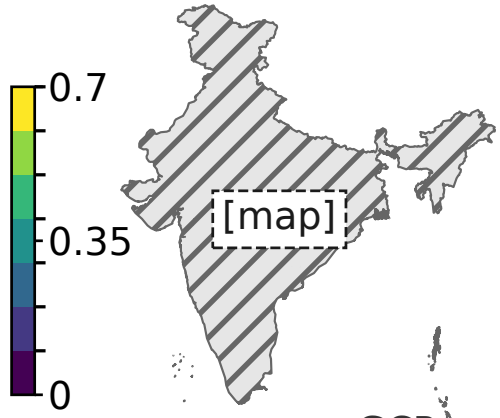

shade model → crop model

simulated for every 0.25° cell
4 crops · 3 layouts
5 climate models

Result

GCR$_{max}$ at RY ≥ 0.8

[X] GWp

east-west panels
slope ≤ 5%
GCM range [X]–[X]

2050: [±X]%

SSP2-4.5, median

mean GCR$_{max}$ per crop

wheat	chickpea	pearl millet	groundnut
[X]	**[X]**	**[X]**	**[X]**
